SUMMARY

Analytics engineer who builds agentic, AI-powered analytics tools and the data models behind them, turning ambiguous business questions into self-serve, agent-driven answers. Shipped a production GenAI product (LLM + ML) and deployed a natural-language data agent, and builds custom AI agents and automation in Python with Claude Code, published as paid products. Strong in SQL and dbt/Snowflake dimensional modeling, prompt engineering, and owning analytics products end to end.

SKILLS & INTERESTS

- Agentic AI & Analytics Engineering: custom AI agents & automation (Claude Code, Python), LLM application development, natural-language-to-insight agents, prompt engineering, retrieval over semantic models, production GenAI (LLM + ML)
- Data Engineering: SQL (window-function & CTE-heavy modeling), dbt dimensional models, Snowflake, semantic / metrics layer, data contracts & quality, Python (Pandas, automation), Git
- Delivery: self-serve analytics products end to end, framing ambiguous questions, executive & stakeholder communication, experimentation mindset, cross-functional partnership

WORK EXPERIENCE

Taco Bell

San Diego, CA

Senior Business Intelligence Analyst

Feb 2025-Present

- Shipped a franchise-wide production GenAI product (LLM sentiment analysis + ML classification over customer-complaint data) and deployed a natural-language data agent (Fabric) that lets franchisees query their own complaint insights by prompt, returning answers over the semantic model rather than a static dashboard.
- Build and maintain dimensional data models in Snowflake (dbt) behind reporting and the GenAI product, using window-function- and CTE-heavy transformations with defined grain and data contracts, then define metrics in Lightdash's semantic layer with Claude Code before the production build.
- Built and instrumented an automated anomaly-detection pipeline with defined alert thresholds, notifying stakeholders daily and cutting response time to data-integrity issues by 40%; maintain the dashboards leadership runs on.
- Own a portfolio of 12+ analytics and reporting products serving 7,000+ locations: sit with franchise and corporate teams to pin down what they actually need, set KPIs and usage targets against formal OKRs, and consolidate or retire products that stop earning their keep, carrying each from first request through deployment.

Animal Supply Co

San Diego, CA

FP&A Data Analyst

Mar 2024-Feb 2025

- Built a demand-forecasting model processing 5M+ rows of sales and inventory data to anticipate needs 30 days out, informing buy/hold decisions within monthly planning and forecasting cycles and improving working-capital efficiency.

Midland Credit Management

San Diego, CA

Operations Analyst

Mar 2023-Feb 2024

- Developed an ML model to forecast at-risk accounts before payment failures, reducing insufficient-funds fees by \$400K annually; built the business case and tracked realized impact.

PCS Industries

San Diego, CA

Data Analyst

Jan 2019-Mar 2023

- Owned pricing, demand, and margin analytics for an e-commerce hardware operation, turning sales, cost, and marketplace data into pricing and inventory decisions across tens of thousands of orders.

PROJECTS

Build and commercialize agentic software end to end. Design and ship custom AI agents and automation tools in Python, built extensively with Claude Code and published as paid products on the Apify marketplace with input interfaces and API endpoints, generating revenue continuously for 6+ months; own the design, prompt engineering, pricing, and maintenance, version-controlled in Git.

EDUCATION

San Diego State University, Fowler School of Business | B.S. Business Administration

Aug 2020-May 2022

San Diego Miramar College | A.S. Business Administration

Aug 2017-May 2020

CERTIFICATES

Microsoft Certified: Fabric Analytics Engineer Associate (DP-600), Mar 2026
